

Understanding Intense Pulsed Light (IPL) Treatment

Unlike Hot Lasers, IPL's are not capable of inducing thermal changes in the skin tissue. When it's used properly, it stimulates, firms and tones skin tissue.

Now, there is a better solution for unwanted hair.....

Hair Reduction - before IPL

Hair Reduction - after IPL

You may be surprised to learn that just about your entire body is covered with hair. Because most of this hair is fine and pale, it usually isn't visible to the naked eye.

But when darker, coarser hair appears in places we don't like or expect, such as on the face, neck, abdomen, breasts or arms, it prevents us from wearing a high-cut bathing suit, shorts or even a short skirt. It may be time to consider hair removal with IPL.

In the past, the usual remedies for unwanted hair were plucking, shaving, waxing or chemical depilatories. Some are painful, some are messy and all are only temporary.

Now, there is a more effective solution: **IPL TREATMENTS!**

Anti-Aging Treatment with IPL

Oxygen and hydration rejuvenate damaged and aging skin. Fine lines and wrinkles are directly treated with IPL to increase the production of collagen and elastin. Your skin is left smooth, glowing and younger looking.

IPL provides a unique program that gives you the results you've always dreamed about!
